

Scale model of the Canyon Meadows Condominiums

Condominium project launched

PROVO CANYON (Special)—Construction began this week on the first two of ten solar-efficient condominiums approved for the Canyon Meadows residential development, according to John Hansen Jr., president.

Designed in duplex configuration by Nelson Boren & Associates, the units adjoin the open meadow which is the centerpiece of the 73-lot development. It is located 10 miles east of the mouth of the canyon and just north of the canyon highway.

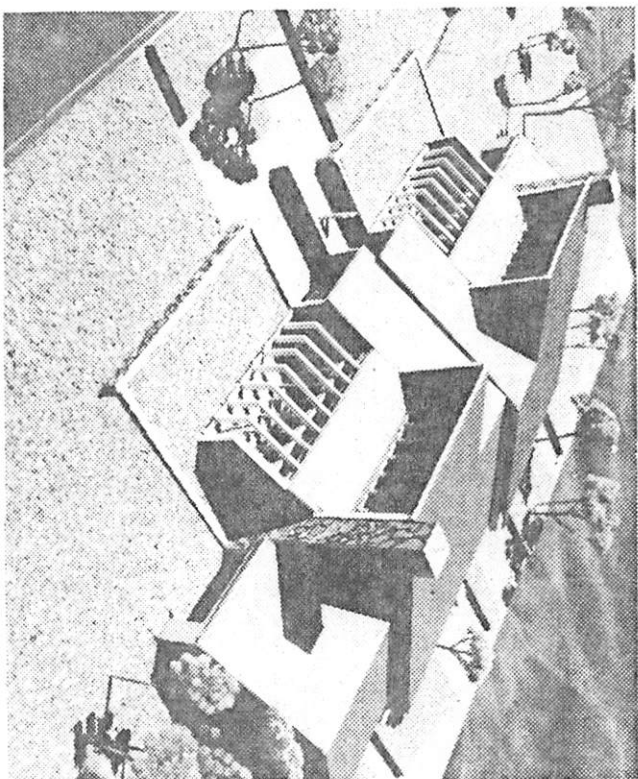

Each 2,600-ft. unit includes living, dining, and sunroom areas, kitchen, bath, and two bedrooms on the ground floor and a master

bedroom, bath, and loft upstairs.

The passive solar design has a trombe wall, clerestory, and greenhouse. A fireplace or wood stove is provided along with backup electric heating.

With their completion expected next spring, the two units will be shown as models for the other condominiums to follow, Mr. Hansen said.

Work also got under way this week on entrance and exit lanes for the Canyon Meadows access from U.S. 189. It is continuing also on roads and underground utility lines for the 26 single-unit home lots approved last month in Phase II of the development.
